

AN-07-0001-1.0 Using AmbioMote24 configuration utility

Sunday, 16 December 2007

Application note AN-07-0001-1.0

This application note describes use of AmbioMote24 configuration utility which allows changes in configuration of sensors, firmware updates and re-programming AmbioMote24 either as a receiver or as a sensor.

The configuration utility allows to configure sensor interfaces and specify a preset or custom sensor configuration without programming. Energy harvesting parameters can be optimized for specific applications. The utility also allows changing of the characteristics of the wireless interface.
